To: John (owner of 128 Bronte Road apartment complex):
D.H. Westview Properties Ltd.
c.c. Terence Young MPP, Ralph Robinson, Alan Johnston, The Oakville Beaver

1. It is regrettable why all of the residents of your apartment complex here were never brought into the discussions of these towers before you committed to them. Why was this process missed and circumvented?
2. Mounting the towers at the top of the elevator shaft as opposed to somewhere else was decided on what basis and for what reason and what potential additional effects or side-effects could be produced by our residents travelling up and down the elevators by the Radio frequency fields? Is exposure greater on the top floors travelled as opposed to the bottom floors?
3. While the government of Canada advises that there is no evidence to suggest that the use of wireless communications networks is dangerous to human health as long as the RF(Radio Frequency) Fields exposure guidelines are respected what happens to our residents if they are not respected by Rogers and the fields emit higher levels of radio frequency than is in the guidelines?
4. Industry Canada is the federal agency who monitors wireless communications equipment for Health Canada but how often will our equipment be monitored and what will the nature of the monitoring be?
5. While the government of Canada requires wireless carriers to design and locate their antennas to ensure public exposure to RF fields from their wireless installations follow Canadian standards
just how large and tall and wide and the average RF field will our residents have to contend with?
Do the RF fields fluctuate or are they larger or smaller at different times of the day?
6. While you have a clause inserted into your lease agreement with Rogers Communications to dismantle the towers should Health Canada RF fields change to reflect there is a health hazard to the public it doesn't appear to change the fact that us residents are victims to a technology that may or may not adversely effect our health. Shouldn't the building management wait until it is PROVEN without a doubt what health effects such towers might cause or produce in our tenants rather than proceed with this EXPERIMENT?
7. Why would you consider a METAL TENANT more important and welcome than your other tenants?
